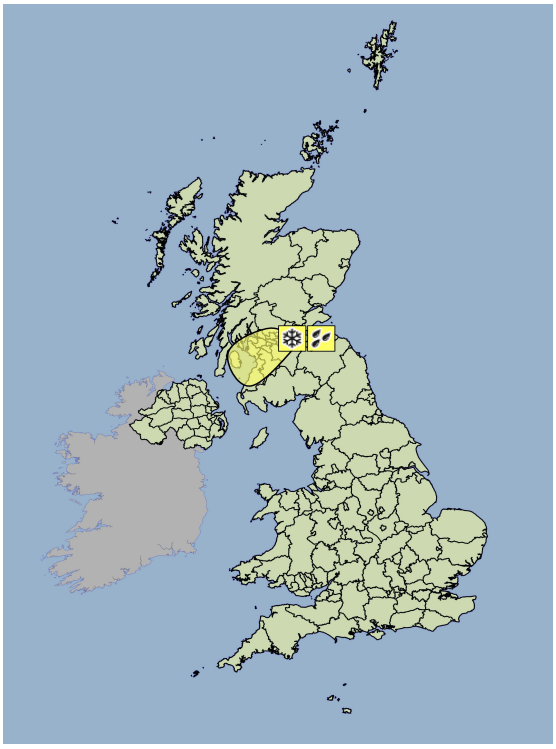
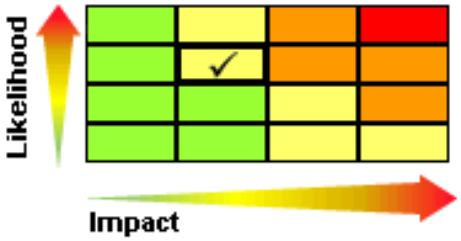
National Severe Weather Warning Service





Chief Forecasters Assessment
A complex low pressure system is wrapping spirals of precipitation around it, one of these focused over the warning area for much of Sunday, before edging away northwards this evening. 20 to 30 mm of rain could fall in some places, which may in itself cause a few problems. The airmass is rather cold, with conditions marginal for snow; any heavy precipitation will tend to swing the balance towards snow rather than rain, so there is the likelihood of some tricky conditions due to some settling snow, at least over some hilly areas.

The Met Office have issued a **Yellow Warning** of **Rain and Snow**

Valid from **11:40 on Sun, 10th Jan 2016** until **20:00 on Sun, 10th Jan 2016**

Outbreaks of rain will continue this afternoon, persistent and also heavy at times, before clearing away this evening. There will also be some snow at times on higher ground, with accumulations of 2 to 5 cm on ground above about 200 to 300 metres.

Please be aware of locally difficult travel conditions, either due to surface water flooding (given the saturated ground), or due to snow on some of the higher routes.
